

# PaceInfeeder

MS 2725 Accurate infeed for filleting

## Optimum fixed-pace infeed

The Marel PaceInfeeder MS 2725 secures a smooth infeed of salmon into the Filleting Machine MS 2730. It adjusts the pace to the settings of the Filleting Machine running at up to 25 fish per minute.

The PaceInfeeder improves the performance of the Filleting Machine and makes the infeed effortless and independent of operator skills. Salmon is released at the set pace into the automatic infeed unit, where it is turned upright so that it always enters the Filleting Machine in the correct position and at the right speed to achieve optimum filleting results.

The PaceInfeeder can be combined with manual deheading to secure a steady flow on the line. This can reduce labor costs as the salmon is automatically transferred into the PaceInfeeder without the need for manual handling.

- Easy and accurate infeed
- Less manual handling
- Better fillet quality
- Fixed-pace setting
- High efficiency

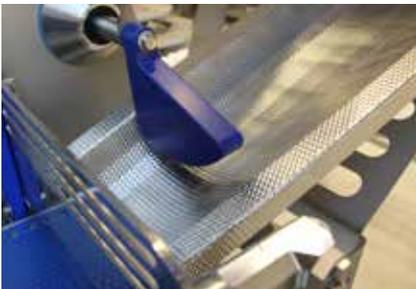

## Technical features

Capacity	25 fish/min.
Product length	370-800 mm
Product width	55-110 mm
Product height	40-100 mm
Product weight	1.5-8 kg
Product condition	Fresh, post rigor
Dimensions (LxWxH)	1700x750x1390 mm
Weight	205 kg
Power	Connected to MS 2730
Compressed air	Connected to MS 2730
Power consumption	0.37 kW
Water consumption	3l./min.
