

# Salmon Slicing

I-slice 135 series for maximum flexibility

## New features ensures greater stability

The I-slice 135 MA is a further development of Marel's fixed weight slicer program with the unique ability of making fixed weight slices or portions or with fixed length and thickness. With the improvements of the I-slice 135 the accuracy and stability of the machine is outstanding.

At the infeed the fillet is weighed and then it is scanned by a new camera with the latest vision technology to measure the volume of the fillet. With this data each fillet gets a cutting profile to meet the specifications of the final product.

A new cutting table has been designed with new style cutting belts to improve precision and stability of the product. For extra support a new product holder is fixating the fillet at the end part on the spike belt to keep it stable during the final cutting process. The operation of the I-slice is easy and safe for all users; through the multilingual colour touch screen all settings are easily made.

- Fixed weight slices, or fixed length and thickness
- Improved stability with product holder
- Minimum handling at retail packing
- High product inlet for special products

The I-slice 135 MA is made with an increased height of the product inlet facilitating cutting of special products. The slicer is available in two versions; as a standard slicer with a cutting angle interval between 8°-45° and as a multi angle edition cutting in a range between 10°-68° or 8°-66°.

Marel can offer a complete solution with 1, 2 or more slicing units, packing stations and check weighing set-ups, customized to meeting your exact requirements.

## Technical features

Capacity slicer:	Up to 130 kg/h
Cutting angle:	8°-45° or 8°-68°
Max cutting width:	1 x 250 mm
Max product length:	750 mm
Max product height:	80 mm inlet opening
Product temperature:	-4° C to +4° C
Electricity:	3x400V + N + PE / 3x220V + PE
Power consumption:	1,8 kW
Compressed air:	10 l/min. min. 8 bar pressure
Dimensions L x W x H:	3640 x 980 x 1485 mm
Weight:	720 kg

Advanced touch screen panel for easy operation

Product holder for stable cutting

Improved transfer to board and packing line
